

## INSTALLATION OF THE DRAIN

- Seen from the **top**, position the **drain** (2) in the hole of the water tank.
- Seen from the **bottom** of the Loopz, place the **seal** (3) around the threads of the drain.
- Next, **screw** the **drainpipe** (4) onto the **thread**. Please note, tighten the part to maintain a waterproof connection.
- Are you planning to use Loopz long-term? We advise to use a **sealant**. Please pay attention to the **direction** in which the drainpipe needs to be placed to connect it to your plumbing.
- Are you ready to have a shower? Place the **plug** (1) in the drain and fill the water tank!
